BENEFITS

- On-demand data storage, server, and connectivity
- Connectivity for shared storage resources
- Improve disk I/O performance
- Improve backup and restore performance
- Decrease data center real estate usage
- Ability to meet high availability requirements
- Reduce support head-count
- Accommodate multi-vendor components
- Provide security to isolate applications' storage

Today's network economy requires more than simply a focus on pure technology issues-it also requires a holistic focus on security strategy and management. The associated risks of the open business environment of today need to be clearly understood and managed in order to make the most of your opportunities. This requires a deep technical knowledge of security processes, products, solutions, and the understanding of your desired business objectives.

The Digerati Group Security Solutions are uniquely equipped to help guard your business against security threats and streamline appropriate information access for your employees, customers, and partners. We are experienced as a security provider for enterprises, non-profit, and SMB. We can help you meet your short-term needs as well as your long-term objectives — from security training to policy definition, data protection to network intrusion detection, platform hardening to implementing and managing a secure global infrastructure. We take a comprehensive approach, with complete lifecycle services, from assessment through design and development, integration and the on-going maintenance and enhancement of comprehensive security solutions.

SECURITY SOLUTIONS

- Security Planning and Governance – to identify security risks, define security policies and governance structures and prepare your employees for security implementations
- Compliance – to implement relevant policies and standards such as PCI Compliance
- Trustworthy Infrastructure – to establish end-to-end IT security and implement appropriate technologies including data centers, networks, productivity tools, desktops, and wireless devices
- Identity and Access Management – to strengthen application-level security with advanced identity provisioning and policy-based access controls
- Proactive Security Management — to provide dynamic capabilities for protecting against and responding to diverse security threats across your IT infrastructure including processes and technologies for patch management, vulnerability scans, and penetration testing
- Security Education and Training – to keep your people current with state-of-the-art practices and technologies
- Hosted Spam Email Filtering

BENEFITS

- Establishes a security infrastructure that meets the needs of your business requirements today and for the future
- Delivers expert security analysis of the enterprise and network
- Develops an adaptable security architecture
- Builds a foundation for your company's overall security strategy and suggestions on how to minimize security risks
- Identifies potential risks and vulnerabilities within your company's policies, process, networks, and systems
